ABSTRACT OF THE DISCLOSURE

- 2 A stringed musical instrument includes a surfboard shaped body with strings on top. The strings
- 3 have first ends attached to tuners under the body adjacent a first end, and second ends attached to
- a fixed anchor on top of the body adjacent a second end. A pitch changer comprised of an

1

- 5 eccentric cam on an axle is positioned on a played string. A lever connected to the axle is
- 6 provided for rotating the cam to adjust the tension on the string. A second embodiment is
- 7 comprised of a body with tuners and a pitch changer adjacent the same end of the body. A third
- 8 embodiment includes a combined tuner and pitch changer comprised of hinged arms with first
- 9 ends pivoted on an axle. The strings are attached to intermediate positions on the arms. Screws
- are positioned against second ends of the arms for adjusting the tension on the strings.
